

POSTHORAX® ChestFix

Thorax Stabilization after Thoracic Surgery

Postopérative Rehabilitation:
Intensive Care / Hospital Ward / Patient's Home

SINGLE PATIENT PRODUCT

Disposable – not washable!
Made in Austria.

PRODUCT DESCRIPTION

This unique special product is made from breathable micro fabric and optimises the surface tension around wounds caused by operations (thoracotomy / minithoracotomy / lobectomy) or injuries (fractured / bruised ribs).

The extremely thin flexible fabric is laser-cut for comfort and acts like an extra layer of skin.

When? As soon as possible after surgery
Why? For pain reduction and respiratory function conservation

ChestFix is an excellent tool in the field of pain therapy as the amount of pain medication administered is significantly reduced, or, ideally, can be replaced completely.

Note : The patient's skin should be clean and dry before application!
